

# ATP MAINTENANCE™

Affordable Maintenance Event Tracking and Forecasting Fully Integrated with ATP Libraries

**Profile** – Build a customized profile of components on your aircraft. Add any components for which you want to track maintenance or service events.

**Due List** – View recommend OEM maintenance events based on current flight times. Due List can be customized to meet your specific maintenance program requirements.

**Integration** – Seamlessly integrates with ATP Libraries for current and precise information and ATP Parts to manage and move parts between aircraft while maintaining their history and times.

**Reporting** – Insightful reporting provided increased awareness of fleet status, compliance, and resource availability. Generate reports that can be shared with the FAA or your customers.

**Tracking** – Maintain a complete history of the aircraft including flight operation times, a record of compliance, warranty information, location of parts, and parts added or removed.

**Utilization** – Increase the utilization of your aircraft by ensuring compliance, increasing availability, and improving productivity by automating manual tasks.

From a single piston aircraft to an entire fleet of jets, ATP® Maintenance is the industry's affordable and easy to use maintenance tracking service that is united with your ATP Libraries and ATP Parts in the state-of-the-art ATP Aviation Hub™ cloud application.

- **Save time and reduce risk** – Due List Generated from the recommended OEM maintenance program in your ATP Libraries.
- **Improve scheduling and customer service** – Forecast events and notify your customers of required maintenance.
- **Ensure fast and reliable access to current information** – Maintenance events linked directly to the instructions in your ATP Libraries.
- **Start to use it quickly with tools already familiar to a worldwide user base** – Easy to use software based on ATP's industry leading cloud services.

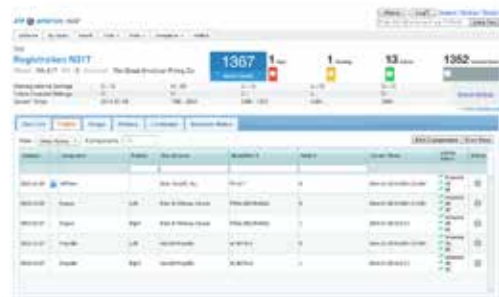

**The Fleet Dashboard gives you the status of your fleet at a glance.**

- Calculate maintenance tasks based on current flight times.
- Track compliance with ADs and SBs in your ATP® Libraries.
- Advanced filters let you choose what information is visible.
- Set permissions to control who can access each aircraft.

**Due Lists calculate maintenance tasks to be completed now, and in the future, based on current flight times.**

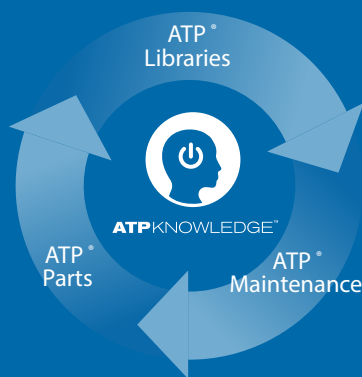

- Filter due limits and events by time, cycles, landings or other values to view only the events you need.
- List all events by ATA code.
- View the most urgent events across the whole aircraft.

**Aircraft Profiles include airframe, engine, propeller, and components.**

- Quickly build a complete profile of all components on the aircraft and track start times for each component.
- Track parts added or removed for each component.
- Track current times for each component with the option to update components with latest flight times.
- Track warranty information for each part.
- Track location of components on the aircraft.

**The ATP Knowledge platform lets you research, prepare and execute maintenance activities in the most efficient manner.**

ATP Maintenance works in conjunction with ATP Libraries for precise maintenance event information. Combined with ATP Parts, the history and compliance of each part is maintained throughout the life of the part. Using the ATP Knowledge platform, mission critical information access has never been so convenient.
