

NAVIGATORV[®]

AVIATION INFORMATION MANAGEMENT SYSTEM

The Right Tool to **Reduce Research Time,**
Manage Regulatory Compliance and **Automate Publication Revisions.**

GLOBAL AVIATION INTELLIGENCE SOLUTIONS[™]

How the Right INFORMATION MANAGEMENT SOLUTION Will Save You Time and Money

An industry study found that AMTs spend as much as
50% of their time researching information.

Moving to digital publications is generally accepted as the first step to improving information access. However, going digital without a well designed solution could actually reduce productivity. It is easy to see how poorly designed digital systems can leave you managing multiple media types, unique user interfaces, and a proliferation of access and audit procedures.

NAVIGATORV[®]

THE RIGHT TOOL TO REDUCE RESEARCH TIME AND
IMPROVE INFORMATION ACCESS AND CONTROL

- Increase efficiency in finding information
- Decrease manuals acquisition and management costs
- Increase confidence in your publication currency
- Decrease time in filing and managing revisions

Five Ways NavigatorV[®] Improves Productivity

Like having the right tool, the right information solution will save you time and money. The NavigatorV[®] aviation information management system (AIMS) reduces research time and simplifies information access and control. It incorporates best practices for managing regulatory and maintenance publications and provides tools designed to increase productivity and simplify access. The following 5 essential benefits demonstrate how NavigatorV improves productivity to save you time and money.

01 A Single Source in a Single Platform Increases Productivity

With ATP and NavigatorV you have access to the largest collection of aviation maintenance information in the industry, including over 1000 maintenance libraries from over 50 manufacturers, and regulatory libraries including FAA and EASA. NavigatorV brings it together in one system—maintenance technical documentation from various manufacturers, regulatory publications, and compliance reporting.

02 Simplify Library Management

A library service from ATP with NavigatorV saves you time by doing most of the administration for you.

- We acquire and organize the publications from manufacturers and agencies
- Our trained professionals and IAs carefully check for accuracy and completeness
- Information is logically organized and indexed including the incorporation of TRs into the manuals
- Revisions are processed quickly and delivered automatically via the Internet or on disc through the mail

03 Be Confident in Your Library Currency

Revision updates are automatically integrated into your NavigatorV[®] library and delivered twice a week via the Internet. Library updates can also be delivered on backup discs in the mail, creating a redundant solution for a highly secure revision process. Additionally, reporting tools make it easy to demonstrate currency.

04 Increase Safety with AD and SB Compliance Tracking

The patented technology in NavigatorV allows you to track and manage compliance to airworthiness directives and service bulletins related to an individual aircraft. Advanced navigation features make it easy to view each referenced publication and reduce your research time. Compliance reports can be stored, updated, printed or delivered electronically.

05 Save Time with the Industry Standard

The NavigatorV[®] aviation information management system (AIMS) is approved by more original equipment manufacturers (OEMs) for publication distribution than any other solution. By partnering with ATP for technical publication distribution through NavigatorV, manufacturers significantly improve research time and simplify access across multiple publications for their customers. NavigatorV is the industry's independent standard for maintenance publication distribution and management.

Features of NavigatorV®

View All Your Content In One Place

No more wasted time searching various sources for regulatory or maintenance information.

Automate Your Revisions

Your technical libraries are automatically updated twice a week via the Internet, and you receive notification by email of each update. No more filing or managing content revisions.

Find What You Need

The advanced search features in the NavigatorV® software platform give you comprehensive search results across all your ATP® maintenance and regulatory content making research quick and easy.

Get What You're Looking for

ATP's patented PowerTrak™ indexing system tracks equivalent model names, manufacturer/model buyouts, and model/series relationships. A single search reveals all information for your specific model and series.

Track Compliance

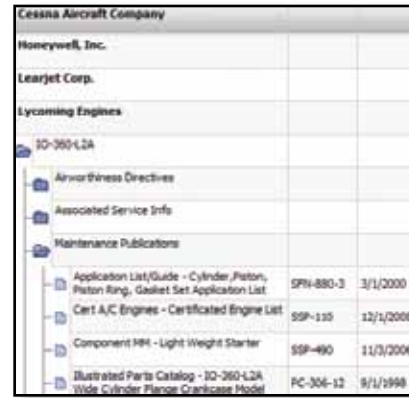

The patented Profile and Compliance tool allows you to create an aircraft profile for the airframe, engine, propellers and appliances. NavigatorV displays all related ADs and SBs with hyperlinked navigation to each publication, simplifying compliance reporting and tracking.

Manage Parts Lists

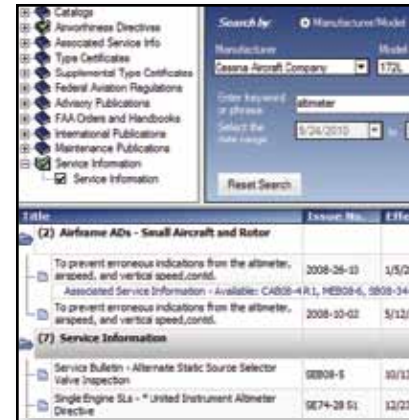

Create and manage a list of parts needed to repair the aircraft. Creating a parts list in NavigatorV directly from the technical publications reduces errors and increases productivity.

Network Your Information

Sharing your content with multiple users on a network is easy with NavigatorV. Networking assures all users have access to current information.
